

Naruto (NARUTO) WHITEPAPER

Abstract

Naruto (NARUTO) a.k.a. \$NARUTO is a meme coin inspired by the popular anime series Naruto, created to engage the anime community and cryptocurrency enthusiasts. This token operates on the Solana blockchain and will be launched on Dexscreener's Moonshot launchpad, ensuring a fair and transparent distribution. The token aims to leverage the fast and scalable Solana network to offer a unique digital asset experience.

Introduction

Meme coins have gained significant attention in the cryptocurrency world, combining elements of popular culture with digital finance. \$NARUTO seeks to harness the widespread appeal of the Naruto series, providing a fun and engaging way for fans to interact with the crypto ecosystem.

Tokenomics

- Name: Naruto
- Ticker: NARUTO
- Blockchain: Solana
- Total Supply: 1,000,000,000 \$NARUTO
- Tax: 0%
- Freeze revoked
- Mint revoked

Distribution

- Fair Launch: All 1,000,000,000 tokens will be available for sale on the Moonshot platform.

Launch Strategy

\$NARUTO will be launched on Dexscreener's Moonshot launchpad, a platform designed to ensure a fair launch process. The Moonshot launchpad simplifies token creation and facilitates liquidity provision.

Steps for Launch:

1. **Fair Launch on Moonshot:**
 - All 1,000,000,000 **\$NARUTO** tokens will be available for sale.
 - No pre-sales, insider allocations, or initial DEX offerings (IDOs).
2. **Migration to Raydium:**
 - Once **\$NARUTO** reaches a market capitalization of 500 SOL, the remaining tokens and the 500 SOL will be used to create a liquidity pair on Raydium.
 - This process includes a deflationary mechanism where 150-200 million tokens are burned, reducing the total supply and potentially increasing the token's value.
3. **Active Trading on Raydium:**
 - Post-migration, **\$NARUTO** will be actively traded on Raydium, a decentralized exchange on the Solana blockchain.
 - Liquidity will be locked to ensure a secure trading environment.

Security and Compliance

- **\$NARUTO** smart contracts will be subject to rigorous audits to ensure security and reliability.
- The Moonshot platform guarantees a fair launch with no pre-sales or insider trading, fostering a transparent and equitable distribution.

Roadmap

Phase 1: Moonshot Launch

- Deployment of \$NARUTO on the Moonshot launchpad.
- Full supply of 1,000,000,000 tokens available for sale.

Phase 2: Migration to Raydium

- Achieve a market cap of 500 SOL.
- Burn 150-200 million tokens.
- Create a liquidity pair on Raydium.

Phase 3: Active Trading on Raydium

- Ensure secure and active trading on Raydium.
- Engage with the community to drive adoption and use.

Conclusion

\$NARUTO aims to bring the excitement of the Naruto universe to the cryptocurrency world. By leveraging the features of the Solana blockchain and the fair launch capabilities of the Moonshot launchpad, \$NARUTO provides a unique and engaging digital asset for fans and investors. Join us as we embark on this thrilling adventure and bring the spirit of Naruto to the blockchain.
